

The 'Apprentices by State' interactive map provides key statistics on apprentices who began (New), were/are currently participating in (Active), and have completed (Completer) apprenticeships at the national, state, and county level for a particular fiscal year (October through September). This is currently a beta release. We will be regularly adding new features to the map as well as updating the map to include FY22 data and the ability to filter by industry, occupation, union participation, wage, and apprentice residence location data. Please note that currently apprentices are depicted based on the location where the apprenticeship program is registered. The data in the map will be refreshed quarterly. Data included in this version of the dashboard is current as of 10/18/22 and only includes State Data (RAPIDS*). The chart below provides additional data on all program types that was previously published on our [data and statistics page](#). To view instructions on how to best interact with the dashboard, click [here](#).
